

# Corrections and Clarifications

## General

- Use standard input (`System.in`) and standard output (`System.out.println()`).
- If input bounds/constraints are not specified for a problem, do not worry about the time limit.
- There are no problems that require you to account for Integer or Long overflow (i.e., BigInteger or anything that serves the same purpose will not be necessary.)

## The Wall

- N for both test cases should be 19, not 20
- Sample Output 1 should be 22, not 17

## Castillo's Castillo

- There are guaranteed to be at least 3 points given in each test case.
- $x$  and  $y$  are guaranteed to be  $< 1000$

## Census Statistics Outliers

- If there are no outliers present, output -1

## Qualification Queries

- R and C are guaranteed to be  $< 500$
